

CHAPTER 1

INTRODUCTION

This project “student information management system” provide us a simple interface for maintenance of student information. it can be used by educational institution or colleges to maintain the information of students easily. achieving this objectives is difficult using a manual system as the information is scattered, can be redundant and collecting information may be very time consuming. all these problems are solved using this project.

Throughout the project the focus has been on presenting information in an easy and intelligible manner. the project is very useful for the who want to know about student information management system and want to develop software/websites based on the same concept.

Purpose : the objective of student information system is to allow the administrator of edit and find out the personal details of a student and allows the student to keeping all the records of student , such as their USN , NAME,MALE,ADDRESS,PHONE NUMBER , DOB etc . so all the information about an student will be available in a few seconds.

Scope : without a student information system managing and maintaining the details of v student is a tedious job . student information system will store all the details of the student including their personal information , marks etc

Login module : login module will help in the authentication of user accounts , users who have valid login id , password can only login into their respective account

Search module : suppose there are 100 students ad from these we have to search a particular student and we know the name of the student . in manual system it is tedious task though we know the name of the student . but using these module we can easily search student by specifying the name of the student in the search criteria.

User management : this module will help the administrator to enable /disable a user account and uploading students information as required .purpose of project is to maintain details of students such as storing information about

1. Student USN
2. Student name
3. Student DOB
4. Contact no
5. Address
6. Gender
7. Course
8. Subject

CHAPTER 2

HARDWARE AND SOFTWARE REQUIREMENTS

2.1 Software specification

Operating system : windows 7 and above

Front end tool: html and css

Backend tool: MySQL and php

Browser: Firefox

2.2 Hardware Specification

500 GB RAM

2TB HDD

Processor: intel core i7

CHAPTER 3

DESIGN AND IMPLEMENTATION

3.1 ER DIAGRAM

Fig 3.1 ER Diagram

3.2 SCHEMA DIAGRAM

Fig 3.2 Schema Diagram

3.3 Modules with description

3.3.1 Use case

UML use case diagrams can be used to describe the functionality of a system in a horizontal way. That is, rather than merely representing the details of individual features of our system, UCD's can be used to show all of its available functionality.

Brief description : this use case is used when the administrator wants to view the Personal details of students already existing in the databases on the screen .

Administrator: Responsible for managing student records.

- Login/logout.
- Add course.
- Edit course.
- Add/remove subject.
- Edit subject.
- View student information.
- Edit student information.
- Search student.

20	board	varchar(50)	latin1_swedish_ci		No	None		
21	roll	varchar(50)	latin1_swedish_ci		No	None		
22	pyear	varchar(50)	latin1_swedish_ci		No	None		
23	sub	varchar(250)	latin1_swedish_ci		No	None		
24	marks	bigint(100)			No	None		

Table No. 4.15 Registration

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	id	int(11)			No	None		
2	session	varchar(50)	latin1_swedish_ci		No	None		
3	postingdate	date			No	None		
4	status	int(11)			No	None		

Table No 4.16 Session

4.1.2 Triggers and stored procedure:

4.1.2.1 Triggers: To update all lower case letters to uppercase before insertion in registration

CREATE TRIGGER 'toup' BEFORE INSERT ON 'registraion'

FOR EACH ROW set new.fname = upper(new fname);

4.1.2.2 Stored procedure to display the details of the student together

Procedure: To display student details

CREATE PROCEDURE getReg()

BEGIN

Select *from registration;

END

Snapshots:

Admin page

A screenshot of an admin login form. The form is titled "Sign In" in a blue header. It contains two input fields: "Login Id" and "Password". Below these fields are two checkboxes: "Remember Me" and "Forgot Password". At the bottom of the form is a green button labeled "login".

Fig 4.11 This wat will we get after click on the admin login, wat we have shown above.

Add course

A screenshot of an "Add Course" form. The form has a title bar "Add Course". It contains three input fields: "Course Short Name*", "Course Full Name*", and "Creation Date". The "Creation Date" field is pre-filled with "21-11-2018". At the bottom of the form is a blue button labeled "Create Course".

Fig4.12 Here we can add n number of courses for students.

Fig 4.16 It is the table where we get academic and non academic details of n number of Students at a time.

Future Enhancement:

- We can add printer in future
- We can more advance software for student management system including more facilities
- We will host the platform on online servers to miscible worldwide.

Conclusion:

- Teachers can manage students information by using these project so paper work can be eliminate.
- Generate marks list any time which allows the teachers to know whether the student is eligible to take the exam or not.
- Overall efficient has improved and work processes simplified.
- Helpful to perform paperless work and manage all information.
- Provide easy , accurate , unambiguous and faster data access.
